

Mechanical cable or pipe seal for new or installed cables for or pipes sealing core drilled holes or wall sleeves (conduits). Made of EPDM rubber to permanently seal the annular space between cables or pipes and the wall opening.

Mechanical seal pressure plate, bolts and nuts must be made of Stainless steel AISI 304 L or 316L.

Rubber must be made of EPDM and available in NBR.

Mechanical cable or pipe seal must have segmented layers for easily adapting to various sizes of cable diameters on site. Cable/pipe OD and pipe ID ranges are listed on the manufacturer's literature for proper fit.

Mechanical seal must be gas-tight, watertight and rodent resistant. Seal must meet a minimum of 36 psig (2.5 bar) against hydrostatic and gas pressure for 24 hours with no leakage.

Approved Mechanical cable/pipe seal: Polywater | Hauff-Technik PHSD SSG SL.

Please refer to Polywater | Hauff Technik PHSD SSG SL flyer for selecting the proper sized PHSD SSG SL seal. If the cable OD or pipe ID falls outside the ranges listed or if you need a customized sealing solution, please contact American Polywater Corporation.
